

# Solutions Overview Guide

## Meeting Room Solution: Courtroom

Q-SYS brings the Zoom Rooms experience to high-impact spaces with a portfolio of Zoom-certified devices tailored to your room's design—whether in-ceiling, open ceiling, or directional audio is required. The Q-SYS Core Processor integrates audio processing, multi-camera switching, automation, and room control, enabling scalable, consistent deployments that meet both technical and user experience goals.

- The Q-SYS Core 8 Flex processor is the hub of the system. It connects to the Zoom Room Compute with a single driverless USB connection for audio and video.
- With the Q-SYS Control for Zoom Rooms app, you can add custom controls to the native Zoom interface. Zoom supports multiple controllers, allowing full room control from various locations within the space.
- Q-SYS NC-Series cameras use the power of the network, allowing you to use as many Q-SYS network conference cameras in the space to provide multiple points of view to frame the right shot.
- AcousticDesign™ Series AD-C6T-ZB ceiling loudspeakers are ideal for overhead loudspeaker placement for in-ceiling and open ceiling applications respectively.
- The Q-SYS NV-21 video endpoint allows multi-stream video encoding or decoding for network-based HDMI video distribution.
- Network gooseneck microphones can be placed in as many positions as needed and are fully controllable through the Q-SYS system.
